

DevMatch AI

Business Plan | 2024

Connecting small businesses with freelance developers through AI-powered matching — fast, accurate, and budget-aware.

1. Executive Summary

DevMatch AI is a platform that connects small businesses with freelance developers for short-term tech projects using AI-powered matching based on skills, budget, and project requirements. The goal is to eliminate hiring friction — no long interviews, no agency fees, just fast and accurate matches delivered in minutes.

2. Problem Statement

- Small businesses need tech help but cannot afford full-time developers.
- Freelance marketplaces like Upwork are overwhelming and slow to navigate.
- Bad matches waste time and money on both sides of the transaction.
- No existing tool intelligently filters by both budget AND skill fit simultaneously.

3. Solution

An AI-powered matchmaking platform with a simple 4-step flow:

Step	Action
1	Business posts a project — budget, timeline, and tech stack required
2	AI scores and ranks freelancers based on fit
3	Top 3–5 matches are presented instantly
4	Business picks, chats, and hires — done

4. Target Market

Segment	Description
---------	-------------

Primary	Small businesses (1–50 employees) needing short-term dev work
Secondary	Freelance developers looking for consistent project flow
Market Size	Global freelance market \$1.5T; SMB tech spend growing 15% YoY

5. Revenue Model

Stream	How It Works
Commission	8–12% cut on each successfully completed project
Premium Listings	Freelancers pay to appear higher in match results
Subscription	Businesses pay monthly for priority matching and analytics
Enterprise	Custom plans for agencies or startups with recurring needs

6. SWOT Analysis

	Positive	Negative
Internal	AI matching = faster hires, low overhead	New platform = trust deficit early on
External	Huge underserved SMB market	Upwork, Fiverr, Toptal are well-established

7. MVP Feature Roadmap

Phase	Timeline	Features
Phase 1 — Core	Month 1–2	Business onboarding, project posting, freelancer profiles, basic AI matching
Phase 2 — Polish	Month 3–4	In-app chat, contract signing, payment escrow, ratings and reviews
Phase 3 — Scale	Month 5–6	Advanced AI learning, analytics dashboard, mobile app

8. Competitive Advantage

- Speed — matches delivered in minutes, not days.
- Budget-aware AI — won't show \$200/hr developers to a \$500 budget project.
- SMB-focused — niche positioning builds trust vs. generic marketplaces.
- No bloat — lean UI compared to Upwork's overwhelming experience.

9. Go-To-Market Strategy

- Launch in one city or region first to build density and trust.
 - Partner with startup incubators and co-working spaces for business-side acquisition.
 - Offer first 3 matches free to businesses to reduce onboarding friction.
 - Reach freelancers via dev communities — Discord, Reddit, GitHub.
-

10. Financial Projections — Year 1

Quarter	Projects	Avg Project Value	Revenue (10% cut)
Q1	50	\$800	\$4,000
Q2	200	\$900	\$18,000
Q3	500	\$1,000	\$50,000
Q4	1,000	\$1,100	\$110,000

Projected Year 1 Total Revenue: \$182,000

11. Team Needed

Role	Type
Full-Stack Developer	Full-time
AI / ML Engineer	Full-time
Business Development / Sales	Full-time
UI/UX Designer	Part-time
